REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: This application teaches a method for forming an image comprising the steps of (a) jetting a droplet of a photocurable ink comprising an oxetane compound having a substituent in the 2-position from an ink-jet head onto a recording material and (b) irradiating the jetted droplet on the ink with an active ray wherein (1) an amount of an energy input to an exposure light source for supplying the active ray is 0.1 to 50 W/cm or (2) the irradiating step is carried out between 0.001 and 2.0 seconds after the jetted droplet of the ink reaches the recording material. The closest prior art of record is U.S. Patent No. 6,846,074, issued to Hirai, which teaches a similar ink jet printing process using a photocurable ink containing a oxetane compound but fails to teach or fairly suggest a photocurable ink containing an oxetane compound having a substituent in the 2-position as claimed by applicants. Therefore, the only possible rejection over the Hirai reference would be based on 35 USC 103 however, applicants have perfected their priority by filing certified English translations of their foreign priority documents. Accordingly, applicants get the benefit of the foreign priority date, which is August 30, 2002. The filing date of Hirai is June 2, 2003, therefore, Hirai is not available as a reference. The only remaining rejections in the application are provisional obviousness double patenting rejections over copending application SN's 10/647,170, 10/ 853,897, 10/826,059, 10/861572 and 10/648,579. As per MPEP 804, the examiner is withdrawing the above provisional obviousness double patenting rejections and passing the application to issue.
